Free Standard Method LTL Freight on orders of 4 or more.

SKYPROTECT

Provides ultrasonic based operator protection when lifting. A sensor detects objects within a pre-set warning zone in the immediate lift vicinity of the operator and inhibits machine operation.

* Standard lead times may be increased when optional equipment is added, consult factory. Capacities and machine weights may differ when accessories and options are added.

SKYPROTECT⁺

Provides ultrasonic based operator protection when lifting while additional protection for driving in reverse is provided through the addition of an enable button.

Both the joystick and secondary enable button must be activated to allow the platform to lift or reverse. When either the joystick or secondary enable functions are released all functions stop.

LANYARDGO

ENSURES HARNESS COMPLIANCE ON SKYJACK BOOMS

Falls from height remain a leading cause of boom operation fatalities. To ensure harness compliance, Skyjack's LanyardGO uses an integrated proximity sensor to detect the lanyard's position, inhibiting lift and drive functions until the operator is safely attached.
